

Brocade VDX 6740, 6740T, and 6740T-1G Switches

HIGHLIGHTS

- Transforms networks to deliver cloud scale, agility, and operational efficiency with Brocade data center fabrics
- Supports 1, 10, and 40 GbE options for optimal flexibility and scale
- Meets today's application demands with high performance and low latency
- Delivers line-rate throughput for all ports and packet sizes
- Fits into any data center design by leveraging 10 GbE/40 GbE uplinks, Ports on Demand (PoD), and Capacity on Demand (CoD)
- Maximizes network availability with efficiency and resiliency
- Supports storage environments with advanced flexibility
- Automates infrastructure provisioning, validation, troubleshooting, and remediation workflows

Advanced Features to Transform Data Centers

Data centers continue to evolve, creating a need for an infrastructure that can support growth in Virtual Machines (VMs), distributed applications, and data, as well as the transition to cloud-based computing—without compromising performance. The Brocade® VDX® 6740 and the Brocade VDX family of switches deliver the performance, flexibility, and efficiency essential to modern data centers, including cloud and highly virtualized environments.

Brocade VDX 6740 Switch

The Brocade VDX 6740 (Figure 1) offers 48 10 Gigabit Ethernet (GbE) SFP+ ports and four 40 GbE QSFP+ ports. Each 40 GbE port can be broken out into four independent 10 GbE SFP+ ports, providing an additional 16 10 GbE SFP+ ports. In addition, the switch features low power consumption, consuming 1 watt per 10 GbE port.

Brocade VDX 6740T Switch

The Brocade VDX 6740T (Figure 2) offers 48 10GBASE-T ports and four 40 GbE QSFP+ ports. Each 40 GbE port can be broken out into four independent 10 GbE SFP+ ports, providing an additional 16 10 GbE SFP+ ports. The switch also features low power consumption, consuming less than 5 watts per 10 GbE port.

Brocade VDX 6740T-1G Switch

The Brocade VDX 6740T-1G (Figure 3) offers 48 1000BASE-T ports and two 40 GbE QSFP+ ports. Each 40 GbE port can be broken out into four independent 10 GbE SFP+ ports, providing an additional eight 10 GbE SFP+ ports for uplink. All 48 1000BASE-T ports can be upgraded to 48 10GBASE-T ports via the Capacity on Demand (CoD) software license. Two 40 GbE ports are enabled as part of the base license. The additional two 40 GbE ports can be upgraded via the Ports on Demand (PoD) software license.

The Brocade VDX 6740, 6740T, and 6740T-1G are all Ethernet fabric Top-of-Rack (ToR) switches that support a demanding data center environment. The Brocade VDX 6740 series of switches provides the advanced feature set that data centers require while delivering

the high performance and low latency virtualized environments demand. Together with Brocade data center fabrics, these switches transform data center networks to support the New IP by enabling cloud-based architectures that deliver new levels of scale, agility, and operational efficiency. These highly automated, software-driven, and programmable data center fabric design solutions support a breadth of network virtualization options and scale for data center environments ranging from tens to thousands of servers. Moreover, they make it easy for organizations to architect, automate, and integrate current and future data center technologies while they transition to a cloud model that addresses their needs, on their own timetable and on their terms.

Transforms Networks to Deliver New Levels of Scale, Agility, and Operational Efficiency

Brocade VDX switches allow organizations to evolve their data center networks at their own pace, with full investment protection.

As the foundation for several data center architectures, Brocade VDX switches support Brocade IP fabrics, Brocade VCS® fabrics, as well as network virtualization, including controller-based network virtualization architectures, such as VMware NSX-V-certified, and standards-based controller-less architectures with Brocade BGP-EVPN Network Virtualization for architectural flexibility (see Figure 4).

For organizations seeking automated provisioning capabilities to improve IT agility, Brocade VDX switches, together with Brocade VCS Fabric technology, accelerate time to value through automated provisioning of network devices and network virtualization. Automated service and resource upgrades further reduce ongoing maintenance time and costs. High availability is achieved through non-disruptive In-Service Software Upgrade (ISSU) and self-healing fabrics.

Optionally, for DevOps-centric organizations, Brocade VDX switches can be provisioned using Brocade Workflow

Composer™ and Brocade Workflow Composer Automation Suites.

Turnkey and Customizable Lifecycle Automation

Organizations that aim to automate the entire network lifecycle but lack sufficient engineering resources can leverage Brocade Workflow Composer, a server-based, DevOps-inspired network automation platform powered by StackStorm. The Brocade Workflow Composer platform automates the entire infrastructure lifecycle—from provisioning and validation to troubleshooting and remediation. It also integrates across IT domains for end-to-end event-driven workflow automation. For more information, see the [Brocade Workflow Composer At-A-Glance](#).

Designed to run with the Brocade Workflow Composer platform, Brocade Workflow Composer Automation Suites are ideal for IT organizations that seek to embrace automation yet possess limited automation training or time. The suites provide out-of-the-box network lifecycle automation for commonly performed tasks, and are packaged to address major use cases.

The automation suites include:

- **Network Essentials:** Basic building blocks to help organizations with limited resources get up and running quickly, including workflows that automate steps common to most networks.
- **Data Center Fabrics:** A collection of workflows specific to provisioning, troubleshooting, and remediating data center fabrics, including Brocade IP fabric deployments.
- **Internet Exchange Points:** Workflows to automate steps specifically associated with Layer 2 Internet exchange connectivity, such as tenant provisioning and maintenance.

Brocade Data Center Fabrics and Network Virtualization Options

Figure 4: Multiple network architectures offer the flexibility that can help organizations rapidly adapt to changing business conditions and traffic patterns.

Each automation suite includes documentation and a collection of turnkey yet customizable workflows, services, sensors, actions, and rules. Organizations can use Brocade Automation Suites as-is or as starter kits for building or customizing workflows specific to their data center requirements to reduce time-to-value. For more information, see the [Brocade Workflow Composer Automation Suites At-A-Glance](#).

Additionally, Brocade VDX switches offer programmability and interoperability options through a PyNOS Library and YANG model-based REST and Netconf APIs. Cloud orchestration and control through OpenStack and OpenDaylight-based SDN controller support enable full network integration with compute and storage resource provisioning and management.

Meets Today's Application Demands with High Performance and Low Latency

As data centers virtualize more of their servers and VM density per server increases, organizations will require higher bandwidth connectivity to support the explosion of data and application processing. With 1/10 GbE connections, Brocade VDX 6740, 6740T, and 6740T-1G Switches deliver the high-performance computing needed to keep up with the demands of a virtualized data center, allowing organizations to reduce network congestion, improve application performance, and meet the capacity required by 1 GbE and 10 GbE servers. The 40 GbE uplinks can easily aggregate high-bandwidth traffic and reduce bottlenecks that occur when aggregating multiple 10 GbE connections, keeping

data center networks working at peak performance.

In a Brocade VCS fabric, Brocade VDX 6740 Switches also help maximize network utilization with hardware-based Brocade Inter-Switch Link (ISL) Trunking. Organizations can create an 80 GbE trunk by utilizing two 40 GbE ports, or a 160 GbE trunk with 16 10 GbE ports. The Brocade ISL trunk is automatically formed between two Brocade VDX 6740, 6740T, and 6740T-1G Switches when they are linked together, allowing traffic to be equally distributed among all ports. This increases link efficiency and limits traffic disruptions, especially during high traffic times. Also, 40 GbE and 10 GbE trunking is supported between Brocade VDX 6740, 6940, and 8770 Switches. Refer to the *Brocade Network OS Management Configuration Guide* for more information.

Brocade Workflow Composer Architecture

Powered by StackStorm

Figure 5: The Brocade Workflow Composer architecture brings workflow-centric, cross-domain network automation to IT operations.

Brocade Metro VCS technology provides an innovative solution to interconnect data centers and their traffic flows over distance, guaranteeing supported traffic characteristics. Metro VCS technology configured for regular Ethernet traffic supports 10 GbE ISLs up to 80 km, 40 GbE ISLs up to 40 km, and 100 GbE ISLs up to 40 km. To configure Metro VCS technology for lossless traffic applications (DCB/FCoE), refer to the *Brocade Metro VCS Pre-deployment Guide* for details.

While an increase in traffic can also create latency issues, Brocade VDX 6740 Switches deliver very low latency through wire-speed ports with 850 ns (Brocade VDX 6740) and 3 μ s (Brocade VDX 6740T/6740T-1G) any-port-to-any-port latency. In addition, the switches deliver an industry-leading 24 MB deep buffer per switch. This provides the buffering capacity to handle increases in traffic, especially

during peak times when ports are congested, allowing traffic to be distributed across the ports. The Brocade VDX 6740, 6740T, and 6740T-1G feature a single ASIC design, instead of multiple ASIC designs commonly found on other switches, further improving performance and reducing latency since all ports can communicate via one ASIC.

Fits into Any Data Center Design

Access ports are positioned to allow for easy server connectivity and to simplify cabling. With a choice of front-to-back or back-to-front airflow, these switches are ideal for ToR deployments connecting servers, storage, and other switches, as well as for providing compatibility for either hot aisle or cold aisle data center designs. With dual-speed functionality, each 1 GbE port also supports 10 GbE connections,

providing the flexibility needed to support a mixed environment as data centers transition to higher bandwidth.

The switches are designed to connect data centers with multiple options to meet individual design requirements. This flexible design provides investment protection, giving organizations a single switch that can support varying data center requirements. The following features help organizations meet their evolving needs:

- **10 GbE or 40 GbE uplinks:**

The 40 GbE SFP+ ports offer the flexibility to expand and interconnect the network infrastructure intelligently and efficiently while reducing bottlenecks. The switches offer the option to separate the 40 GbE uplinks into four 10 GbE uplinks via breakout cables. As capacity and need increase, organizations can revert to 40 GbE when ready.

- **Ports on Demand:** Ports on Demand (PoD) enables organizations to activate 24 to 64 ports. They can purchase the number of ports that they currently need and seamlessly scale up later by simply applying a software license. This flexible and cost-efficient “pay as you grow” licensing model solves scalability challenges by allocating IT resources as needed.
- **Capacity on Demand:** The Capacity on Demand (CoD) license for the Brocade VDX 6740T-1G enables organizations to upgrade all 48 1000BASE-T ports to 48 10GBASE-T. This helps organizations migrate seamlessly from 1 GbE to 10 GbE via a software license without ripping and replacing the physical switch.

Maximizes Network Availability with Efficiency and Resiliency

Brocade data center fabrics create a more efficient and resilient network, and deliver the high performance and high reliability required by today’s data centers.

Optimizing East-West Traffic

Traditional data centers are architected with a rigid, three-tier tree topology optimized for the north-south traffic flow of client-server computing environments, compromising performance, increasing latency, and creating bottlenecks. With the increased prevalence of virtualization and distributed applications, data center network traffic is now predominantly east-west, or server-server. Brocade data center fabrics were designed and optimized to address these traffic patterns by moving traffic through any of the active paths and avoiding the multiple hops required in other tiered topologies

In-Service Software Upgrade

The Brocade VDX 6740 family of switches delivers a highly efficient ToR In-Service Software Upgrade (ISSU) by leveraging a software model that uses a dual-OS infrastructure on a multi-core CPU. This enables data center administrators to deliver enterprise-class business continuity on ToR switches during a software upgrade/downgrade process. This software change process is non-disruptive to Layer 2, Layer 3, Fibre Channel, and FCoE traffic. Moreover, the ISSU implementation is hardware-optimized, thus reducing the time it takes to complete the upgrade/downgrade process.

Supports Storage Environments with Advanced Flexibility

The Brocade VDX 6740, 6740T, and 6740T-1G offer advanced storage support with multiple storage connectivity options, including FCoE, Fibre Channel (Brocade VDX 6740 only), iSCSI, and NAS storage. They also feature Data Center Bridging (DCB), which enables the reliable exchange of storage traffic over the LAN network, eliminating packet loss when network congestion occurs and allocating bandwidth as needed to keep the network running efficiently. Moreover, the switches offer Network-Attached Storage (NAS) Auto QoS intelligence to prioritize delay-sensitive IP storage traffic within the fabric and to help ensure consistent performance while decreasing latency.

The Brocade VDX 6740 features 32 Flex Ports, which can take either a 10 GbE or 16 Gbps Fibre Channel personality. In Fibre Channel mode, these Flex Ports can be used to either directly connect Fibre Channel storage to VCS fabrics or bridge

FCoE traffic to Fibre Channel SANs, thus protecting existing SAN investments. The Flex Ports and FCoE features on the Brocade VDX 6740 can be turned on with an add-on software license.

Brocade Global Services

Brocade Global Services has the expertise to help organizations build scalable, efficient cloud infrastructures. Leveraging 20 years of expertise in storage, networking, and virtualization, Brocade Global Services delivers world-class professional services, technical support, and education services, enabling organizations to maximize their Brocade investments, accelerate new technology deployments, and optimize the performance of networking infrastructures.

Acquisition Options That Match Balance Sheet Objectives

Successful network deployments drive business forward, providing technical and financial agility. Brocade offers the broadest financing models, from traditional leasing to Brocade Network Subscription. Network-as-a-Service allows organizations to subscribe to network assets today then upgrade on demand, scale up or down, or return them with 60-day notification. Brocade Network Subscription plans can be structured to meet IASC guidelines for OpEx or CapEx treatment to align with financial goals. Learn more at www.nonetworkcapex.com.

Maximizing Investments

To help optimize technology investments, Brocade and its partners offer complete solutions that include professional services, technical support, and education. For more information, contact a Brocade sales partner or visit www.brocade.com.

Brocade VDX 6740, 6740T, and 6740T-1G Hardware Ordering Information

See the Brocade VDX Transceiver Support Matrix for optics and cable ordering details.

Hardware SKU	Description
BR-VDX6740-24-F	Brocade VDX 6740, 24P SFP+ ports only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740-24-R	Brocade VDX 6740, 24P SFP+ ports only—no optics, AC, port-side exhaust airflow
BR-VDX6740-48-F	Brocade VDX 6740, 48P SFP+ ports only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740-48-R	Brocade VDX 6740, 48P SFP+ ports only—no optics, AC, port-side exhaust airflow
BR-VDX6740-64-F	Brocade VDX 6740, 64P SFP+ ports only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740-64-R	Brocade VDX 6740, 64P SFP+ ports only—no optics, AC, port-side exhaust airflow
BR-VDX6740-64-ALLSW-F	Brocade VDX 6740, 64P SFP+ ports only—no optics, AC, FCoE, VCS fabric, non-port-side exhaust airflow
BR-VDX6740-64-ALLSW-R	Brocade VDX 6740, 64P SFP+ ports only—no optics, AC, FCoE, VCS fabric, port-side exhaust airflow
BR-VDX6740T-24-F	Brocade VDX 6740T, 24P 10GBASE-T ports only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740T-24-R	Brocade VDX 6740T, 24P 10GBASE-T ports only—no optics, AC, port-side exhaust airflow
BR-VDX6740T-48-F	Brocade VDX 6740T, 48P 10GBASE-T ports only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740T-48-R	Brocade VDX 6740T, 48P 10GBASE-T ports only—no optics, AC, port-side exhaust airflow
BR-VDX6740T-64-F	Brocade VDX 6740T, 48P 10GBASE-T and 4 SFP+ ports only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740T-64-R	Brocade VDX 6740T, 48P 10GBASE-T and 4 SFP+ ports only—no optics, AC, port-side exhaust airflow
BR-VDX6740T-64-ALLSW-F	Brocade VDX 6740T, 48P 10GBASE-T and 4 SFP+ ports only—no optics, AC, FCoE, VCS fabric, non-port-side exhaust airflow
BR-VDX6740T-64-ALLSW-R	Brocade VDX 6740T, 48P 10GBASE-T and 4 SFP+ ports only—no optics, AC, FCoE, VCS fabric, port-side exhaust airflow
BR-VDX6740T-56-1G-F	Brocade VDX 6740T-1G, 48P 1000BASE-T and 2 40 GbE QSFP+ ports, upgradable to 10GBASE-T via license only—no optics, AC, non-port-side exhaust airflow
BR-VDX6740T-56-1G-R	Brocade VDX 6740T-1G, 48P 1000BASE-T and 2 40 GbE QSFP+ ports, upgradable to 10GBASE-T via license only—no optics, AC, port-side exhaust airflow
BR-VDX6740-8x10G-POD	8-port PoD license for Brocade VDX 6740 and 6740T
BR-VDX6740-2x40G-POD	2-port 40 GbE PoD license for Brocade VDX 6740 and 6740T
BR-VDX6740T-1G-16X10G-COD	16-port 1 GbE to 10 GbE Capacity on Demand (CoD) upgrade license for Brocade VDX 6740T-1G

Brocade VDX 6740, 6740T, and 6740T-1G Software License Ordering Information

Software SKU	Description
BR-VDX6740-FCoE	Software, FCoE license for Brocade VDX 6740 and 6740T
BR-VDX6740-VCS	Software, VCS license for Brocade VDX 6740 and 6740T ³
BR-VDX6740-ALLSW	Software, VCS and FCoE license for Brocade VDX 6740 and 6740T ³

³ VCS license is not required when running Brocade NOS 4.1 or later releases.

Brocade VDX 6740, 6740T, and 6740T-1G FRU and Optics Ordering Information

FRU and Optics SKU	Description
XBR-250WPSAC-F	FRU 250 W AC power supply/fan, non-port-side exhaust airflow, Brocade VDX 6740
