Cloud scale for WAN aggregation

The Cisco® Network Convergence System 5500 Series offers industry-leading density of routed 100 Gigabit Ethernet (100GE) ports for high-scale WAN aggregation. The NCS 5500 Series is designed to efficiently scale between data centers and large enterprise, web, and service provider WAN and aggregation networks.

Product overview

The Cisco Network Convergence System (NCS) 5500 modular chassis series includes the Cisco NCS 5504 modular chassis, Cisco NCS 5508 modular chassis and the Cisco NCS 5516 modular chassis (Figure 1). The Cisco NCS 5504 supports up to four line cards, six switch fabric cards, two route processors, two system controllers, three fan trays, and four power supplies. The Cisco NCS 5508 supports up to eight line cards, six switch fabric cards, two route processors, two system controllers, three fan trays, and eight power supplies.

Figure 1.
Cisco NCS 5504, Cisco NCS 5508 and NCS 5516 chassis

The Cisco NCS 5516 supports up to 16 line cards, 6 switch fabric cards, 2 route processors, 2 system controllers, 3 fan trays, and 10 power supplies. These routers support 10, 25, 40, 50* and 100 Gigabit Ethernet ports. The Cisco NCS 5504 supports upto 14.4 Tbps full duplex, the NCS 5508 supports upto 28.8 Tbps full duplex and the Cisco NCS 5516 supports upto 57.6 Tbps full duplex today. With the introduction of the new NCS 5700 400 GE line cards, the per slot forwarding capacity increases by 2.67 times on each of the modular chassis to a maximum of 153.6 Tbps full duplex on the Cisco NCS 5516.

Cisco NCS 5500 chassis components

The Cisco NCS 5500 chassis are built using the components illustrated in Figure 2, which are described in the following sections. Figure 2 shows components of a Cisco NCS 5508 chassis. The NCS 5504 and NCS 5516 uses the same components with the exception of chassis-specific fabric modules and chassis-specific fan trays. The Cisco NCS 5516 has 16 line cards and Cisco NCS 5504 has 4 line cards.

Cisco NCS 5500 series line cards

The NCS 5500 chassis supports the Quad Small Form-Factor Pluggable (QSFP) Cisco NCS 5500 Series line cards described in Table 1.

Cisco NCS 5500 series switch fabric cards

The 3 variants of Cisco NCS5500 modular chassis, NCS 5504, NCS 5508 and NCS 5516 chassis have a Clos fabric design that interconnects the line cards with rear-mounted fabric modules. It supports up to six switch fabric cards per system and all fabric cards are directly connected to all line cards. With load balancing across fabric cards, the architecture achieves optimal bandwidth distribution within the chassis. (See Table 2.)

Cisco NCS 5500 series fan trays

Three hot-swappable fan trays are supported on the NCS 5504, NCS 5508 and NCS 5516 chassis with front-to-back cooling. The fabric modules reside behind the fan trays and each fan tray covers two fabric modules. Fan trays provide N+1 redundancy and any one of the fan trays can be removed in-service at a time to access the underlying fabric cards.

Cisco NCS 5500 2nd generation fabric cards and fan trays

IOS-XR release 6.6.25 introduces new generation of fabric cards and fan trays for NCS-5508 (NC55-5508-FC2 and NC55-5508-FAN2) and NCS-5516 (NC55-5516-FC2 and NC55-5516-FAN2). The newer generation of fabric cards and fan trays for NCS-5504 (NC55-5504-FC2 and NC55-5504-FAN2) is introduced in IOS-XR release 7.2.2 and 7.3.1. With the second generation of fabric cards and fan trays, NCS-5504, NCS-5508 and NCS-5516 get readiness to add NCS 5700 400 GE and 100GE line cards. For more details, refer the [datasheet](#) for the 2nd generation fabric cards and fan trays.

Cisco NCS 5500 series route processor

A pair of redundant route processor cards manages all routing operations on the Cisco NCS 5504, Cisco NCS 5508 and NCS 5516 chassis. (See Table 3.)

Cisco NCS 5500 series system controller

A pair of redundant system controllers offloads chassis management functions from the route processor cards. The controllers are responsible for managing power supplies and fan trays and monitoring the environmental conditions in the chassis. (See Table 4.)

Cisco NCS 5500 series power supply

The Cisco NCS 5500 Series supports hot-swappable, front-panel-accessible power supplies. N+1 and N+N (grid) redundancy modes are supported for a fully loaded Cisco NCS 5504 and NCS 5508, and N+1 and N+M redundancy modes are supported for a fully loaded Cisco NCS 5516. The 3000W AC and DC power supplies are 80 Plus Platinum rated, providing more than 92 percent efficiency across typical workloads. (See Table 5.)

With the new 4.4KW DC power supply (NC55-PWR-4.4KW-DC), N+1 and N+N feed redundancy are supported on NCS 5504, NCS 5508 and NCS 5516.

The additional unused power-supply slots are not needed with existing line cards, but they offer headroom to support higher-bandwidth line cards in the future.

NCS 5500 Series Power Supplies

Specification

NCS 5500 Series 4.4 kW DC Power Supply (PID - NC55-PWR-4.4KW-DC)

- 4400W DC Power Supply
- Input Voltage: -48V to -60V DC
- Three DC inputs with 2.2KW 12V DC output max from each input
- Delivers 2200W when only 1 input is active, 4400W when 2 inputs or 3 inputs are active for 12VDC output.
- N+1 PSU redundancy and N+N Grid/Feed redundancy for NCS 5504, NCS 5508 and NCS 5516.
- With A-bus and B-bus inputs alternated between PSU inputs. with the loss of a redundant bus, two power supplies will supply 6.6KW, with one PSU at 4.4KW and other at 2.2KW of 12V DC Power
- Supported from IOS XR release 7.3.1 onwards.

Software requirements

The Cisco NCS 5508 supports Cisco IOS® XR Software Release 6.0 and later, and the Cisco NCS 5516 supports Cisco IOS XR Software Release 6.1 and later, Cisco NCS 5504 supports Cisco IOS XR Software Release 6.3 and later.

For a complete list of supported features, refer to the [Cisco Feature Navigator](#).

Specifications
