

Cisco ASR 1000 Series Embedded Services Processors

PB449981

The 5-, 10-, 10-N-, and 20-Gbps Cisco® ASR 1000 Series Embedded Services Processors (ESPs) (part numbers ASR1000-ESP5, ASR1000-ESP10, ASR1000-ESP10-N, and ASR1000-ESP20, respectively) provide four centralized forwarding-engine options for the Cisco ASR 1000 Series Aggregation Services Routers (Figure 1). The 5-Gbps ESP (ESP5) supports 5 Gbps of bandwidth. The 10-Gbps ESP (ESP10 and ESP10-N) support 10 Gbps of bandwidth and can be deployed in customer networks that require 1+1 redundancy. The 20-Gbps ESP (ESP20) supports 20 Gbps of bandwidth and can be deployed in customer networks that require 1+1 redundancy (refer to fault-tolerant configuration in Table 3).

Performance highlights of the ESP20 include hardware-assisted quality of service (QoS), encryption capability of 8 Gbps, and special jitter- and latency-minimizing multicast packet replication. Encryption capability of the ESP10 is rated for 4 Gbps whereas ESP5 is rated for 1.8 Gbps. The ASR1000-ESP10-N has the same performance characteristics as the ASR1000-ESP10 but does not support encryption services.

All three ESPs are based on the innovative Cisco Packet Processor for next-generation forwarding and queuing in silicon.

New Features

The 5-, 10-, 10-N-, and 20-Gbps ESPs offer the following new features:

- Integrate full range of industry-leading Cisco IOS® Software features and services
- Guarantee carrier-class High Availability through hardware and software redundancies
- Offer flexible number of queues per interface and hierarchical QoS support

- Optimized for IPv6 packet routing and multicast traffic broadcasting at line rate
- Process packet header and data segments to provide Deep Packet Inspection
- Ideal for next-generation and triple-play (data, voice, and video) broadband networks, including upcoming capabilities such as ad insertion
- Provide field-replaceable and hot-swappable module that helps ensure minimal service disruption
- Offer greatly improved price/performance ratio
- Provide unrivaled feature velocity through configurable multicore Cisco Packet Processor

Upgrade Paths

Cisco ASR 1000 Series Routers are included in the standard Cisco Technology Migration Program (CTMP). Refer to www.cisco.com/go/TMP and contact your Cisco account representative for program details.

Software Support

The 5- and 10-Gbps ESPs are supported in Release 2.1 of the Cisco IOS XE Software or higher. The 20-Gbps ESP is supported in Release 2.2 of the Cisco IOS XE Software or higher.

Availability

The 5- and 10-Gbps ESPs are generally available. The target first customer shipment for the 20-Gbps ESP is September 2008.

Ordering Information

To place an order, visit the Cisco Ordering Home Page at www.cisco.com/en/US/ordering/index.shtml and refer to Table 1. For further information, please refer to the Cisco ASR 1000 Series Aggregation Services Routers Orderability product bulletin.

Please refer to Tables 2, 3, and 4 for compatible hardware, and Table 5 for compatible software.

To download software, visit the Cisco Software Center at <http://www.cisco.com/kobayashi/sw-center>.

Service and Support

Cisco offers a wide range of services programs to accelerate customer success. These innovative services programs are delivered through a unique combination of people, processes, tools, and partners, resulting in high levels of customer satisfaction. Cisco services help you protect your network investment, optimize network operations, and prepare your network for new applications to extend network intelligence and the power of your business. For more information about Cisco Services, refer to [Cisco Technical Support Services](#) or [Cisco Advanced Services](#).
